

Progress Report

Current Build vs. Baseline Version

What has been designed, built, and hardened on top of the original fork point — with genuine, authenticated side-by-side screenshots of every major screen, old and new.

Baseline version	11 commits, dated 24–31 May 2026 (last commit 8c84e30)
Current version	34 commits total on top of that baseline, working tree fully committed, latest commit b94e9f6 (05 Aug 2026)
Net change	927 files changed · +120,847 / −4,205 lines
Report generated	05 August 2026
Method	Git diff/log analysis of both versions, plus live authenticated screenshots of both applications

How the "before" screenshots were captured: The baseline source was checked out into an isolated worktree, pointed at a *fresh, local-only* Docker Postgres database (its own migrations + seed data, fully disconnected from the live production database), and run on a separate port. This makes every "before" screenshot in this report a genuine, authenticated render of the old application — not a mock-up — while guaranteeing zero risk to live data throughout.

1. Executive summary

The current codebase is not a small iteration on the baseline — it is a substantially rebuilt HR platform. The baseline delivered a working attendance/leave app with a 4-role model and Excel-only attendance import; everything below was added, replaced, or hardened afterward.

927 FILES CHANGED	+120,847 LINES ADDED	34 COMMITTS SINCE FORK	47 NEW DATABASE MODELS
143 TEST FILES (WAS 15)	42 DOCS (WAS 20)	18 MIGRATIONS (WAS 5)	3 DEPLOY TARGETS (WAS 1)

What's new in this update (captured 05 Aug 2026): the **Recruitment / Hiring Workspace module** — previously reported as an uncommitted, partially-broken work-in-progress — landed as a single commit ([b94e9f6](#) , "Add recruitment module foundation with resume storage and import review flow") and the working tree is now fully clean. The module also got substantially more complete in the process: the Overview hub, Interviews, and Settings pages — all broken or stubbed in the last snapshot — now load real data. Analytics is the one holdout, stuck on a loading-skeleton state on repeated attempts. Full detail in Section 2.

What's brand new since the baseline

- **Recruitment / Hiring Workspace** — job openings, candidates, applications pipeline, interviews, offers, employee conversion, recruiter communications, AI-assisted candidate insights **NEW, COMMITTED**
- **Helpdesk / ticketing system** — employee tickets, anonymous tickets, HR assignment & comment threads, notifications **NEW**
- **Security hub** — login history and active-session management with revoke, for both admins and employees **NEW**
- **Account / user management console** — admin-facing user administration separate from the employee directory **NEW**
- **Attendance settings** — working-day/date-override configuration **NEW**
- **Multi-format attendance import** — Excel, daily PDF, and eSSL Summary PDF, now with a resumable, chunked async job pipeline for large files **REBUILT**
- **Employee dashboard redesign** — year-to-date attendance heatmap, selected-date KPI hero, history preview **REDESIGNED**
- **Supabase PostgreSQL + Cloudflare/OpenNext deploy path** alongside the original Vercel/Neon target **NEW**
- **CI/CD** — GitHub Actions build/test pipeline, CodeQL scanning, Dependabot **NEW**
- **Role model consolidated** from 4 roles ([admin](#), [hr_admin](#), [manager](#), [employee](#)) to 3 ([super_admin](#), [hr](#), [employee](#)) — the standalone Manager dashboard was retired, though its approval-inbox capability survived, relocated into the employee-scoped [/employee/approvals](#) route **CHANGED**

Section 2 covers the new Recruitment module. Section 3 is the timeline. Section 4 is a genuine before/after of the login screen. Section 5 covers screens that are entirely new. Section 6 shows real before/after pairs for screens that existed in the baseline and were carried forward. Section 7 covers the retired Manager role. Section 8 is infrastructure/database, and the appendix has full route and methodology detail.

2. Recruitment / Hiring Workspace

BRAND NEW, NOW COMMITTED

This is the largest single addition captured in this report and did not exist at all two snapshots ago. It is an internal Hiring Workspace — explicitly *not* a public-facing ATS: candidates have no login, there is no career portal, and AI is assistive-only (it never rejects, moves a stage, or sends communications on its own). It lives entirely under the existing admin shell at `/admin/recruitment/*` and reuses the same 3 system roles — no `recruiter` or `hiring_manager` role was added; those are hiring-team assignments on top of the existing Employee hierarchy.

METRIC	VALUE
New database models	39 (candidates, job openings, applications, interviews, offers, hiring decisions, communications, AI insights, pipeline templates, and more)
New routes	~30, under <code>/admin/recruitment/*</code> (dashboard, jobs, candidates, pipeline, interviews, offers, conversions, communications, reports, settings)
New migrations	7 — foundation, candidate foundation, communication core, saved-filter reports, hardening indexes, recruiter assessment, candidate profile extension
New docs	PRD, architecture, technical spec, implementation blueprint, and schema design — 5 documents in <code>docs/RECRUITMENT_*.md</code>
Status	Committed in full (<code>b94e9f6</code> , "Add recruitment module foundation with resume storage and import review flow") — working tree is clean

Honest status check, page by page — most things got fixed since the last snapshot: Job Openings (29 open), Candidates (265 active), the Pipeline kanban board, Offers, Employee Conversion, and Communications all load with substantial realistic demo data. The **Overview/Dashboard hub** and **Interviews** page — both broken or unconfirmed last time — now load real data (the dashboard shows live KPIs: 29 open jobs, 31 offers awaiting response, 39 pending conversions; Interviews shows 100+ scheduled rounds). **Settings** went from an explicit "Coming Soon" stub to a fully built email-template manager with dozens of real templates. The one remaining rough edge: the **Analytics** nav item (System Operations section, not recruitment-specific) is stuck on a loading-skeleton state on repeated attempts — reported as-is. The dedicated recruitment **Reports** → **Hiring** page, by contrast, is fully built: funnel, pipeline aging, candidate sources, hiring trends, recruiter performance, and time-to-hire, all with CSV/Excel/PDF export.

Recruitment Dashboard — now live: 29 open jobs, 31 offers awaiting response, 39 pending conversions

Candidates — 265+ active records, filters by status/source/recruiter

Settings — now a full email-template manager (was "Coming Soon")

3. Development timeline

GIT HISTORY

Reconstructed from commit history and the repository's own day-wise development log. Dates are commit dates, not calendar-accurate sprint boundaries.

24–31 May 2026 — Baseline

11 commits

- Initial Next.js + Prisma HRMS app: 4-role model (admin/hr_admin/manager/employee), core attendance/leave/employee workflows, Excel attendance upload
- Neon/Vercel production hardening: migration ordering, seed logic, login-redirect and RSC-crash fixes

16 Jul 2026 — Deployment prep & password management

3 commits

- Excel column-alias support for more biometric export formats; auto-login creation on employee upload; change-password actions/UI across roles

20 Jul 2026 — Supabase migration & resilience

1 commit

- Moved deployment target to Supabase PostgreSQL; added DDoS/rate-limit protection and fail-tolerant actions/API routes; dashboard loading/error states

21 Jul 2026 — Helpdesk, accounts, sessions, audit

1 commit

- The single largest feature drop: Helpdesk/ticketing domain, login-history & active-session tracking, account-management workflows, dashboard audit view

22 Jul 2026 — Employee dashboard redesign

2 commits

- YTD attendance heatmap, selected-date KPI/hero, history preview and navigation

23–24 Jul 2026 — Cloudflare builds & production checkpoint

3 commits

- Reproducible Prisma/WASM builds for Cloudflare + OpenNext; broad consolidation across Prisma, auth, tickets, and user management for a deploy checkpoint

28 Jul 2026 — Security hub & biometric import polish

2 commits

- Consolidated security pages (overview, current device, sessions, revoke, login-history filters); improved biometric Excel parsing

29 Jul – 3 Aug 2026 — Multi-format attendance import & CI

10 commits

- eSSL Daily Basic Report PDF import, then a full eSSL *Summary* PDF state-machine parser with per-row dates and duplicate/employee checks
- Auto-created employees and auto-detected dates for PDF imports, matching existing Excel behavior
- GitHub Actions CI, CodeQL scanning, Dependabot; fixes for Cloudflare/Vercel build failures (missing Prisma engine, enums shim)
- Fixed a transaction timeout on large PDF uploads (latest commit)

4 Aug 2026 — Resumable chunked attendance import ships

8 commits · 73f75e9 ... ccc3d36

- The `AttendanceImportJob` model (previously in-progress/uncommitted) landed for real: large files now import via a resumable, chunked job pipeline instead of one long transaction
- Fixed Buffer vs. Uint8Array handling for Prisma `Bytes` fields; targeted Supabase Postgres explicitly for the import-jobs schema; `prisma migrate deploy` now runs on Vercel builds
- Sped up duplicate-row skipping and added visibility into which employee codes were skipped

4–5 Aug 2026 — Recruitment / Hiring Workspace module

1 commit · b94e9f6, 509 files

- An entire internal hiring workspace ships: job openings, candidates, applications, interviews, offers, hiring decisions, communications, AI-assisted candidate insights, employee conversion, and resume storage — see Section 2 for full detail
- 7 new migrations, 39 new database models/tables, ~30 new routes under `/admin/recruitment/`, and 5 new planning/spec documents
- Landed largely complete: jobs, candidates, pipeline, interviews, offers, conversions, communications, settings, and hiring reports all work with real data; the recruitment analytics view is the one page still stuck loading
- Alongside it: the Manager approval-inbox component was generalized and relocated into `/employee/approvals` (Section 8), plus shared layout/sidebar tweaks

4. Login & visual identity BEFORE / AFTER

Both rendered live from their respective codebases.

BEFORE — light theme, "Zebbl Attendance" branding, local email/password only

AFTER — dark theme by default, rebranded "HRMS", same layout skeleton retained

The form structure (email + password + submit) is intentionally unchanged — the rebrand is cosmetic (dark theme, new product name) rather than a workflow change. Microsoft Entra ID SSO exists in the codebase (</api/auth/microsoft>) as an optional provider on both versions when Azure AD env vars are configured.

5. Screens that are entirely new

DID NOT EXIST IN THE BASELINE

4.1 Helpdesk / ticketing

NEW

Before: no ticket, complaint, or workplace-concern channel anywhere in the baseline — HR issues had no in-app tracking.
After: full ticketing domain with categories, priorities, statuses, anonymous tickets routed only to Super Admin, HR assignment, comment threads, and notifications on every state change.

Admin Helpdesk — ticket queue with status/priority breakdown

Employee-side ticket view

4.2 Security hub — login history & active sessions

NEW

Before: no session visibility or revocation of any kind. **After:** org-wide session search/filter with device, browser, OS, IP and location, CSV/Excel export, and per-session revoke; employees get a scoped version for their own account.

Admin Security & Sessions overview

Employee-side security & sessions view

4.3 Account / user management NEW

Before: user accounts were only manipulable indirectly through the employee directory. **After:** dedicated admin console for account status, role assignment, and user administration.

⚙

🔔

Attendance settings

Configure the organization's default weekly working schedule and date-specific exceptions.

Weekly working schedule

Default classification for each day of the week. Date-specific overrides below always take precedence.

Monday ☒ Working	Tuesday ☒ Working	Wednesday ☒ Working	Thursday ☒ Working	Friday ☒ Working	Saturday ☐ Off	Sunday ☐ Off
---	--	--	---	---	--	--

Expected work minutes / day

480

Used only for attendance-day effectiveness (the heatmap)
— separate from payroll settings.

Save schedule

Date-specific overrides

A specific date always overrides the default weekly schedule.

🕒

No overrides configured

Date overrides you add will appear here.

Admin — Attendance settings & date overrides

6. Major rebuilds BEFORE / AFTER

6.1 Attendance import MAJOR REWRITE

Excel-only single-file upload → Excel + Daily PDF + eSSL Summary PDF, with report-type auto-detection, per-row date resolution, auto-created employees, an optional preview/confirm step, and now a resumable, chunked async job pipeline ([AttendanceImportJob](#)) so large files no longer risk a single long-running transaction timing out.

6.2 Employee dashboard REDESIGNED

Baseline employee dashboard showed present/absent stats and a basic attendance list. Current build adds a selected-date KPI hero with live check-in status, a year-to-date daily-hours heatmap, and an attendance-history preview panel.

7. Carried-over screens

REAL BEFORE / AFTER PAIRS

These existed in the baseline and remain conceptually the same feature — same navigation slot, same core purpose — just visually and functionally evolved.

The screenshot displays the Zetel AMS web application interface. The top navigation bar includes the Zetel AMS logo, a search bar, and a user profile icon. The left sidebar contains a list of navigation items: Admin, Dashboard, Upload, Employees, Attendance, Payroll attendance, Leaves, Calendar, Notifications, Integrations (highlighted), Analytics, Operations, Audit log, Settings, and Payroll settings. The main content area is titled 'Integrations' and features a subtitle: 'Microsoft Teams, Outlook calendar, Graph API health, and escalation automation'. The interface is divided into several sections: 1. Microsoft Teams: Includes a link to 'Teams incoming webhook URL' (https://outlook.office.com/webhook/...) and a checkbox for 'Enable Teams approval cards (uses secure AMS approval links)'. 2. Escalation threshold (hours): A numeric input field set to '24'. 3. Outlook calendar sync (requires Graph API): A checkbox for 'Organization directory sync' and a text input field for 'Org sync policy (JSON)' containing '[]'. A 'Save integration settings' button is at the bottom. 4. Operations: A section for 'Health checks and background job controls' with three status indicators: 'Graph health' (green), 'Process jobs' (yellow), and 'Queue org sync' (red, labeled 'Not checked'). 5. Calendar sync diagnostics: A section for 'Recent Outlook calendar operations' with a status indicator 'No calendar sync activity yet.' (yellow).

[illegible]

The screenshot shows a web application for HRMS. The top navigation bar has a logo and the text 'HRMS' and 'Super Admin'. Below it is a search bar. The left sidebar contains a list of menu items: 'Dashboard', 'Employees', 'Attendance', 'Payroll Attendance', 'Leaves', 'Calendar', 'Helpdesk', 'Upload Data', 'Overview', 'Job Openings', 'Candidates', 'Applications', 'Interviews', 'Offices', 'Employee Conversion', and 'Communication'. The main content area is titled 'Leave calendar' and has a subtitle 'Organization leave and holidays — filter by department.' Below this is a filter bar for 'August 2026' and various departments: 'Customer Success', 'Engineering', 'Finance', 'HR', 'IT', 'Marketing', 'Operations', 'Product', 'QA', and 'Sales'. The 'Engineering' department is selected. Below the filter bar is a table with columns: 'Employee', 'Department', 'Type', 'Period', and 'Status'. The table is empty, and a message 'No leave in this period.' is displayed in the center.

8. Retired since the baseline: the Manager role

REMOVED, BUT NOT FULLY

The baseline shipped a fourth role — Manager — with its own dashboard, approval inbox, and settings page. Its own dashboard copy candidly says the workflow was a stub: *"Team overview and approval queue (workflow coming in a later phase)."* The current build consolidated `admin / hr_admin / manager / employee` down to `super_admin / hr / employee`, and the standalone Manager dashboard/settings pages are gone. But the approval-inbox *capability* did not disappear — it was generalized into a role-agnostic "Approval Center" at `/employee/approvals`, available to any employee who has direct reports (an org-hierarchy capability now, not a separate role). The underlying component (`manager-approval-inbox.tsx`) is literally the same file, relocated and renamed.

Manager dashboard (baseline only, retired) — 1 direct report, approvals stub

Manager approvals (baseline only, retired)

Successor: Approval Center

Current build — `/employee/approvals`, shown here for an account with no direct reports ("queue is clear")

9. Database, infrastructure & deployment

9.1 Role model consolidation

BASELINE	CURRENT
<code>admin</code> , <code>hr_admin</code> , <code>manager</code> , <code>employee</code> (4 roles)	<code>super_admin</code> , <code>hr</code> , <code>employee</code> (3 roles)

This is a breaking schema change, not additive — `UserRole` enum values were renamed/merged. A baseline instance pointed at a current-schema database cannot read current user rows for exactly this reason (values like `super_admin` don't exist in its enum) — which is why this report's baseline screenshots were captured against an isolated database seeded with baseline-shaped accounts, rather than the live one.

9.2 New Prisma models (47 total)

8 core HRMS models plus 39 Recruitment-module models (Section 2). Core models:

MODEL	PURPOSE
<code>LoginSession</code>	Session tracking backing the Security hub (device, browser, IP, revoke)
<code>Ticket</code> / <code>TicketMessage</code> / <code>TicketHistory</code>	Helpdesk domain — ticket record, threaded messages, audit history
<code>AttendanceSettings</code> / <code>AttendanceDateOverride</code>	Configurable working-day rules and date-specific overrides
<code>AttendanceImportJob</code>	Async job tracking for large attendance-file imports — now committed and live
<code>AttendanceSession</code>	Per-check-in/out session detail underlying the attendance heatmap

Recruitment models (39) span five sub-domains: `JobOpening` / `JobOpeningStage` / `JobOpeningDocument` ; `Candidate` and its Personal/Education/Experience/Skill/Certification/Project/Document/Tag/Ailnsight children; `Application` / `ApplicationStageHistory` ; `Interview` / `InterviewFeedback` / `InterviewPanelist` / `InterviewAttachment` ; and `Offer` / `OfferRevision` / `HiringDecision` / `RecruitmentCommunication` / `EmployeeConversionSnapshot` . Full detail in `docs/RECRUITMENT_SCHEMA_DESIGN.md` .

9.3 New enums (32 total)

Core (9): `LoginSessionStatus` , `AccountStatus` , `AttendanceOverrideType` , `AttendanceImportJobStatus` , `TicketCategory` , `TicketType` , `TicketPriority` , `TicketStatus` , `TicketMessageVisibility` . Recruitment (23): status/type enums for jobs, candidates, applications, interviews, offers, hiring decisions, communications, and AI insights.

9.4 Deployment & ops

AREA	BASELINE	CURRENT
Database	Neon Postgres (direct connection)	Supabase Postgres via pooled connection, with env/connectivity pre-flight scripts
Deploy targets	Vercel only	Vercel <i>and</i> Cloudflare Workers via OpenNext, plus local Docker Postgres for dev

CI/CD	None	GitHub Actions: Prisma validation, typecheck, lint, tests, production build
Security scanning	None	CodeQL + weekly Dependabot updates
Migrations	5 migration sets	18 migration sets
Tests	15 files	143 files
Docs	20 files	42 files
package.json scripts	75 entries	94 entries

Appendix A — Routes added since baseline

ROUTE	ROLE	STATUS
/admin/tickets	Admin/HR	New
/admin/tickets/[id]	Admin/HR	New
/admin/tickets/anonymous	Super Admin only	New
/admin/security	Admin/HR	New
/admin/security/login-history	Admin/HR	New
/admin/security/active-sessions	Admin/HR	New
/admin/user-management	Super Admin	New
/admin/attendance-settings	Admin/HR	New
/employee/tickets	Employee	New
/employee/security	Employee	New
/change-password	All roles	New
/admin/recruitment/*	Admin/HR	New (~30 routes, committed, Section 2)
/manager/*	Manager	Removed (role consolidated; approvals moved to /employee/approvals)

Appendix B — Methodology

- Repository comparison: fetched the baseline repository as a separate remote alongside the current working repository; confirmed the baseline tip is a strict ancestor of the current branch, then diffed it against the working tree (committed + uncommitted).
- Current-build screenshots: captured headlessly against the live running dev server using the project's own database, authenticated as the seeded Super Admin, HR, and Employee accounts.
- Baseline screenshots: the baseline commit was checked out into an isolated git worktree, pointed at a brand-new local Docker Postgres database, migrated and seeded with its own baseline-shaped demo accounts (admin, manager, employee), and run on a separate port. Every baseline screenshot in this report is a genuine authenticated render — none are reconstructed or mocked.
- No write, migrate, or seed operation was ever run against the live production database in producing this report; all baseline exploration happened against an isolated, disposable local database.
